

TinyStories TiDAR losses (stable to 90k, KL run after 90k)

Logs used:

- stable: /proj/giant-data/TiDAR/checkpoints/TinyStories_exp/tidar_stable/params/logs.txt
- kl+greedy: /proj/giant-data/TiDAR/checkpoints/TinyStories_exp/tidar_kl0p1_greedy0p3/params/logs.txt

The cut line marks step 90,000. Left panels show the stable run up to the cut. Right panels show the KL run from the cut to the last logged step.

Run summary

Segment	Steps	Points	Metrics
Stable <= 90000	1..90000	181	loss, ar, diff, greedy_acc
KL >= 90000	90000..121500	64	loss, ar, diff, greedy_acc, hard, kl_fwd

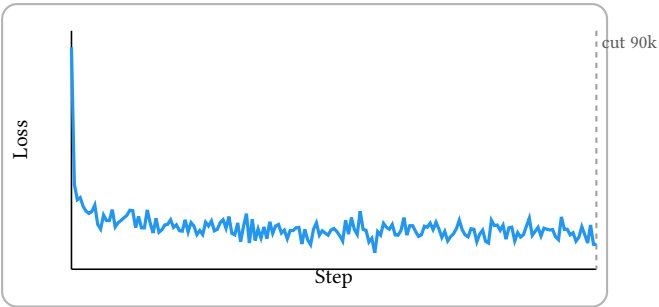

Metric snapshots

Metric	Stable at 90000	KL at 121500
loss	4.3909	5.4240
ar	1.3116	1.3753
diff	3.0794	3.1297
greedy_acc	0.4560	0.4590
hard	-	2.4788
kl_fwd	-	1.7534

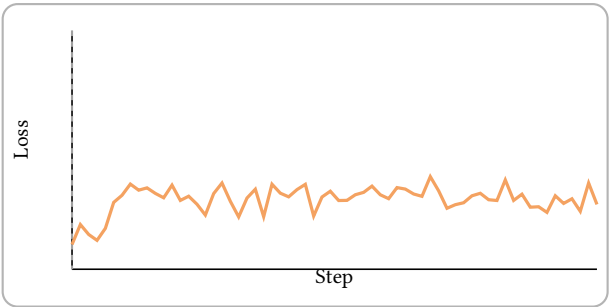

Metric charts

Total loss

Stable <= 90k

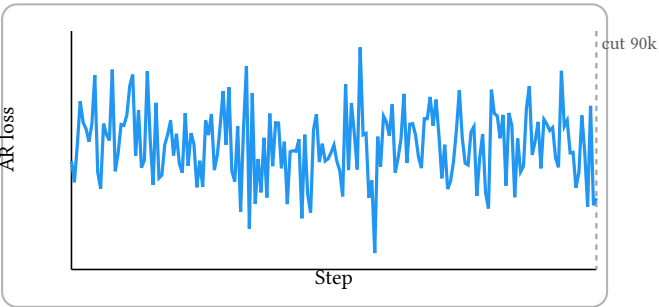

KL >= 90k

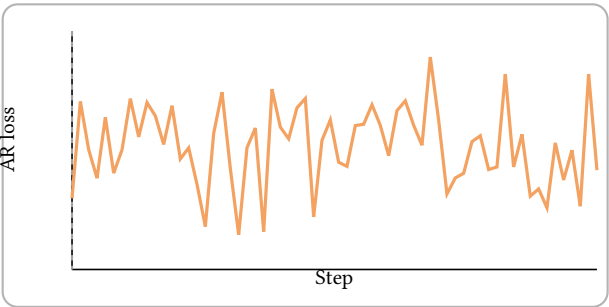

AR loss

Stable <= 90k

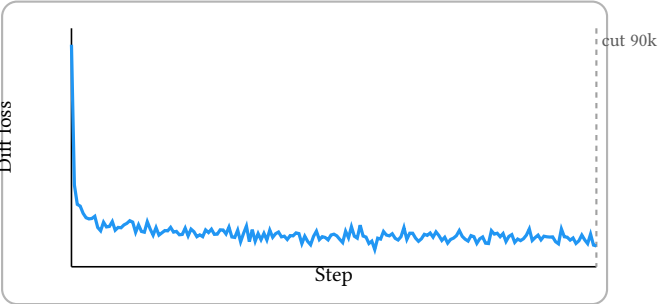

KL >= 90k

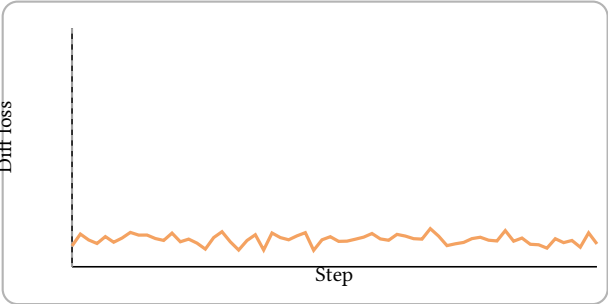

Diffusion loss

Stable <= 90k

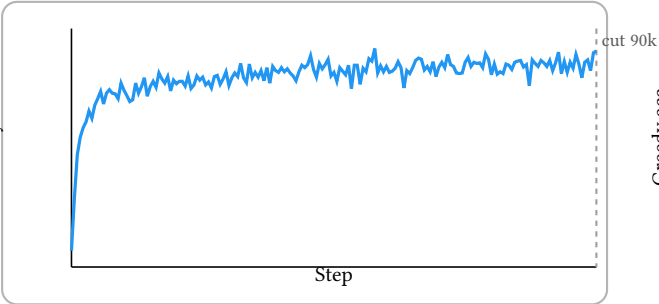

KL >= 90k

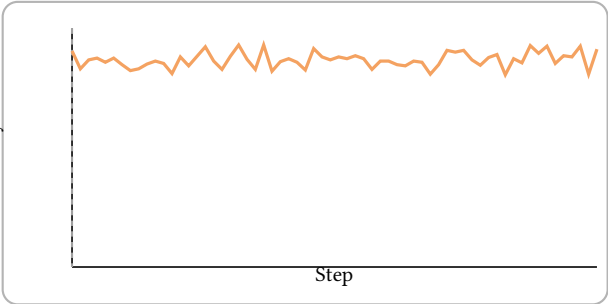

Greedy acceptance

Stable <= 90k

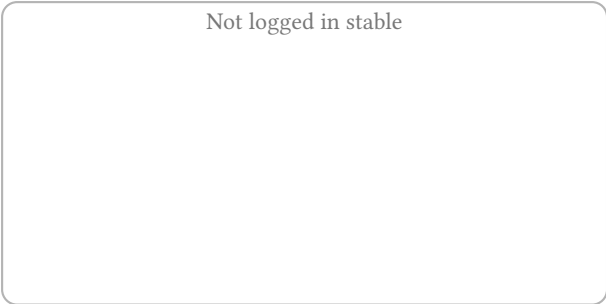

KL >= 90k

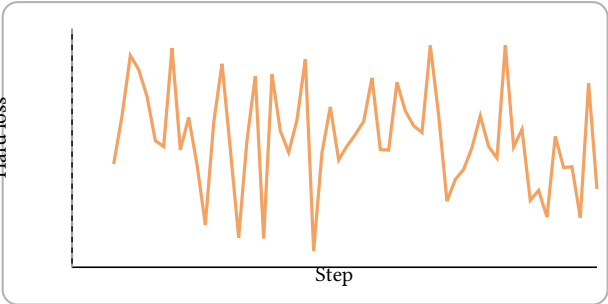

Hard (greedy) loss

Stable <= 90k

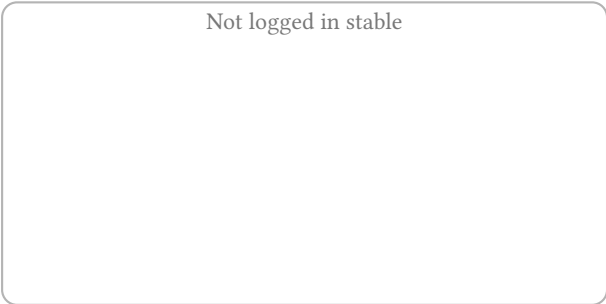

KL >= 90k

KL forward

Stable <= 90k

KL >= 90k
